

Abstract of the Disclosure

A wheel spinner assembly adapted to be mounted on a motorcycle wheel includes a hub that fits onto the central portion of the wheel rim assembly. A flanged member is mounted for rotation on one or more bearings supported on the hub. The flanged member includes a plurality of radially extending connector flanges. Individual spinner wings are removably and replaceably connected to the connector flanges so as to extend radially outwardly therefrom. An annular cap member is disposed adjacent to the bearing(s) in engagement with an end wall of the hub and holds the bearing(s) in place. Bolts extending through the cap member and the hub affix the assembly to the wheel rim assembly.
